

# LITESCOUT® – SUPPLEMENTARY

## SAFETY AND CARE INSTRUCTIONS

Please follow these instructions for the proper startup, care, and cleaning of your LiteScout® system:

- It is possible to operate the LiteScout® at maximum brightness (converter module frequency and voltage at Pos. 3). However, doing so for extended periods will reduce the life of the light source, especially in brand new LiteScouts®. Therefore, to get the most out of your LiteScout®, we recommend that you never set the light source any brighter than necessary (cf. bottom of p. 7 of User Instructions).
- Clean the frame, light surface, and all other plastic parts using a soft, lint-free cloth and the plastic cleaning fluid shipped with your system. You can also use household glass cleaner or rubbing alcohol on particularly difficult stains. Just spritz a small amount onto the cloth and rub the stain gently (don't press too hard!).
- Avoid any pooling of water on the LiteScout®. However, a small amount of moisture or isolated droplets that may form on the light surface while you are cleaning or otherwise using the light surface (e.g., a bit of saliva from the children using the unit) will not harm the unit.
- Avoid using pointed or sharp objects directly on the light surface. The transparent plastic cover shipped with your unit and the white filter or color filters are meant to be placed **underneath the work surface**.
- Avoid drawing directly on the light surface. The transparent overhead sheet shipped with your unit is meant to be placed **underneath any coloring or drawing surfaces**.
- The color may rub off the magnetic films and leave marks on the light surface. Therefore, we recommend that before you **put something underneath the work area** to protect the light surface before you start working with the magnetic films.
- Always disconnect the LiteScout® from the converter module before transporting it anywhere.

### TIP:

- We recommend that you use the robust nylon carrying case to transport your LiteScout® (see p. 10 of the product catalog). **For ordering information, visit [www.litescout.com](http://www.litescout.com).**
